## RESTRICTIONS

Please beware of the following restrictions against this software.

This software install process calls a 64bit specific install module at 29% of the UPDD install and in some circumstances the install fails at this point. Further investigation has revealed that some 64 bit systems do not have the runtime components of Visual C++ Libraries required to run 64-bit applications developed with Visual C++. Should an install fail on a 64 bit system please install the 64 bit C++ libraries available below and rerun the install.
